Access Portal
BASIC

- **Free:** no licenses or cost, simple download
- **Customisable:** configurable for your unique needs
- **Upgradable:** seamlessly upgrade with an Access Portal Pro license unlock

100 doors **1,000** tagholders

WHO SHOULD USE ACCESS PORTAL BASIC?
The software is suitable for any sized business wanting an elementary access control system, without the expense of licenses:

- Corporate and business sectors
- Industry or manufacturing
- B&Bs and hospitality industry
- Education facilities
- Gated communities

PRODUCT BENEFITS:

- Free download
- Anti-pass back doors
- Web-based accessibility
- Auto install simplicity
- Personalised dashboard
- Reporting

Access Portal Basic provides features that are normally only available with licensed software, such as the ability to manage your site no matter where you are through an HTML5 internet enabled device like a smart phone or tablet, and integration with a variety of biometric readers.

Installation is simplified with an auto-install function which includes automatic hardware configuration to reduce the traditional time and complexity associated with deploying such powerful software. The system also includes a number of standard reports for the effective management of your premises – such as a hours worked report or a transaction report.

An enhanced feature of the software is the ability to create a personalized dashboard, with frequent tasks or actions being accessible at the click of a mouse, which makes operating the system simpler.

Access Portal Basic includes a number of high-end features, not often bundled with free software. This includes setting up anti-pass back doors (APB) and the ability to custom design access cards.

The other high security feature is lock down. With just a click, the premises can be immediately locked down - giving you the power to control the site in an emergency.

Upgrade

Access Portal Basic can be quickly and easily upgraded through the purchase of a Pro license, which seamlessly unlocks additional functionality without having to migrate data or impacting your operation in any way.

The software requires a computer to install and run the software, and operates a SQL database.
